PROJECT

1. Global Clock: Timezone Visualization Project

Developed a dynamic web application that showcases real-time clocks across multiple time zones using advanced HTML, CSS, and JavaScript. This project helps users visualize global time discrepancies and has potential for further enhancements like integrating additional time zones and interactive features.

2. Stock Market Analysis Website

Created a dynamic platform using Flask, HTML, and CSS that integrates real-time financial data for up-to-date market analysis. The website features an intuitive interface, designed to enhance user engagement and provide seamless tracking of stock performance, with continuous monitoring to keep the platform relevant and user-friendly.

3. Customer Churn Analysis

Implemented a machine learning model to analyze customer churn and predict customer attrition based on historical data. The project involved identifying key patterns and trends to help businesses retain customers and reduce churn rates.
